

DMart Sales Analytics Dashboard

Project Overview

This project analyzes **10,001 retail transactions** from a simulated DMart dataset using **MySQL** and **Tableau**. The objective is to transform raw sales data into interactive dashboards that support business decision-making.

Objectives

- Analyze sales performance
- Evaluate store performance
- Identify top and bottom products
- Analyze customer payment preferences
- Monitor monthly sales and profit trends
- Compare category performance

Tools Used

- Tableau
- MySQL
- Microsoft Excel

Dataset Information

Attribute	Value
Records	10,001
Database	MySQL
Visualization Tool	Tableau
Dashboard Count	3
SQL Queries	25+

Dataset Columns

- Order ID
- Order Date
- Month
- Month Name
- Week
- Store
- City
- Category
- Product
- Quantity
- Price
- Discount
- Sales
- Profit
- Payment Mode

SQL Analysis

Implemented SQL queries for:

- Total Sales
- Total Profit
- Total Orders
- Average Sales
- Average Profit
- Sales by Category
- Profit by Category
- Sales by Store
- Sales by City

- Top 10 Products
 - Bottom 10 Products
 - Monthly Sales Trend
 - Monthly Profit Trend
 - Store Ranking
 - Payment Mode Distribution
 - Payment Preference by Store
 - Discount Analysis
 - Price Analysis
-

Dashboard 1 – Store Performance

Visualizations:

- Sales by Store
- Sales by City
- Profit by Store
- Store Ranking

Purpose:

Evaluate sales and profit across stores and cities.

Dashboard 2 – Product Analysis

Visualizations:

- Top 10 Products
- Bottom 10 Products
- Product Profit
- Product Quantity

Purpose:

Identify the best and worst performing products.

Dashboard 3 – Sales Trends

Visualizations:

- Monthly Sales Trend
- Monthly Profit Trend
- Sales by Category
- Payment Mode Distribution

Purpose:

Monitor sales growth and customer payment behavior.

Key Insights

- Category performance varies across departments.
 - Payment modes are distributed across Cash, Card, Wallet, and UPI.
 - Monthly sales trends remain relatively stable with seasonal variations.
 - Product rankings help identify high- and low-performing items.
 - Store-level analysis supports regional performance comparisons.
-

Skills Demonstrated

- SQL
- MySQL
- Data Cleaning
- Data Analysis
- Tableau
- Dashboard Design
- Business Intelligence
- Data Visualization
